Tester 1: Sales: Invoices, Customers & suppliers

E.C Commutator Application – test assignment

Before you start

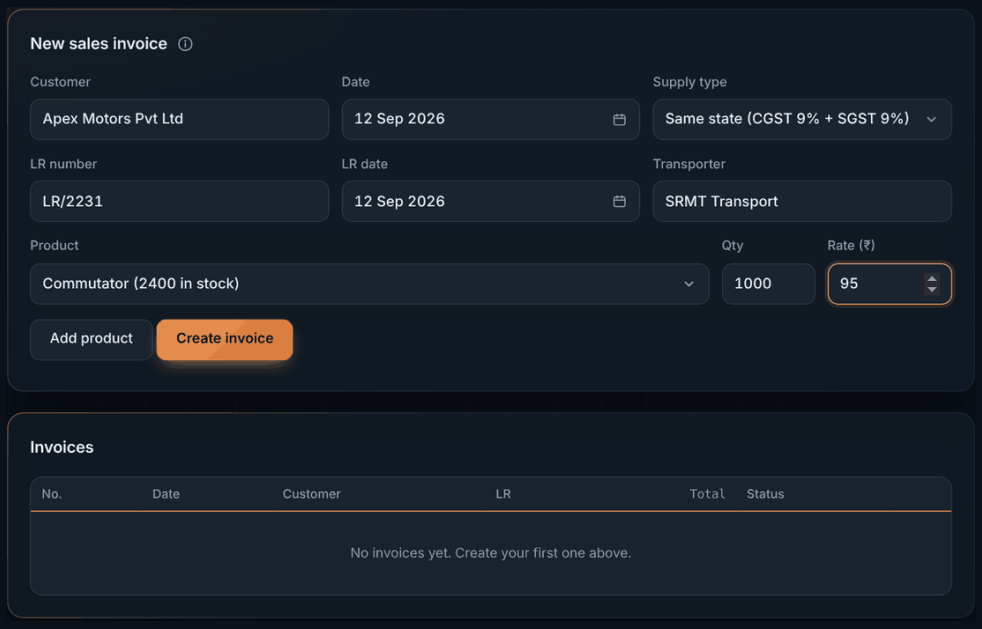

Item	Detail
Open	https://nagasadam.github.io/ec-commutator/test/
Username / password	tester1 / (given to you separately)
Version	Test copy with sample data. The orange pill says “TEST COPY · not real data”.
Your module	Invoices · Customers & suppliers

All four testers work on the **same** sample data at the same time. Other people’s entries will change totals, so judge each result by the **change** your entry causes, not by the absolute figure. Stick to your module’s entries so results stay clear. Never use Reset or “Delete every business”: it wipes the shared data for all four testers. Use a computer browser (Chrome) for the first pass, then repeat a few steps on a phone.

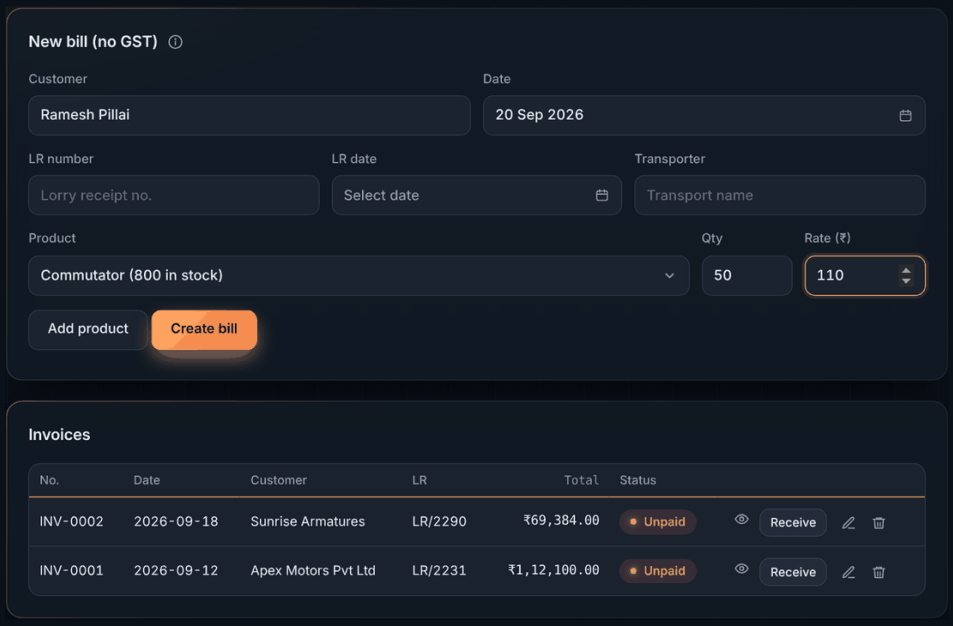

Invoices

Create GST invoices for companies (INV-) and plain bills for persons (BILL-). Stock drops when you save. Sample data has INV-0001 to INV-0003 and BILL-0001.

Test steps

#	Do this	Expected result
1	New sales invoice: pick Apex Motors, item Commutator, qty 100, rate 95, add LR no. LR/T1-01 and transporter. Save.	Taxable ₹9,500 + CGST ₹855 + SGST ₹855 = ₹11,210. New INV- number appears in the list. Commutator stock falls by 100.
2	New sales invoice for Sunrise Armatures (Karnataka): Commutator qty 100 at rate 98.	Interstate: IGST 18% = ₹1,764, total ₹11,564 (no CGST/SGST).
3	New bill for Ramesh Pillai (person): Commutator qty 10 at rate 110.	Number starts with BILL-, no GST, total ₹1,100.
4	Open an invoice with View. Check Print and LR number.	Invoice shows customer, GSTIN, date, LR number, tax lines and total.
5	Try to sell more commutators than are in stock.	Refused: “Only N Commutator in stock. Record production first.”
6	Edit an invoice that already has a payment and make its total smaller than the amount paid.	Refused: “The new total is less than the amount already paid or credited.”
7	Delete your own test invoice (trash icon).	A confirmation names the invoice; after Delete the goods go back into stock and its payments/returns are removed too.
8	Leave quantity at 0 or empty.	“Add at least one product with a quantity.”
9	Clear the rate on an item with no default price.	“Enter a selling rate for each item.” (items with a default price fill it in).

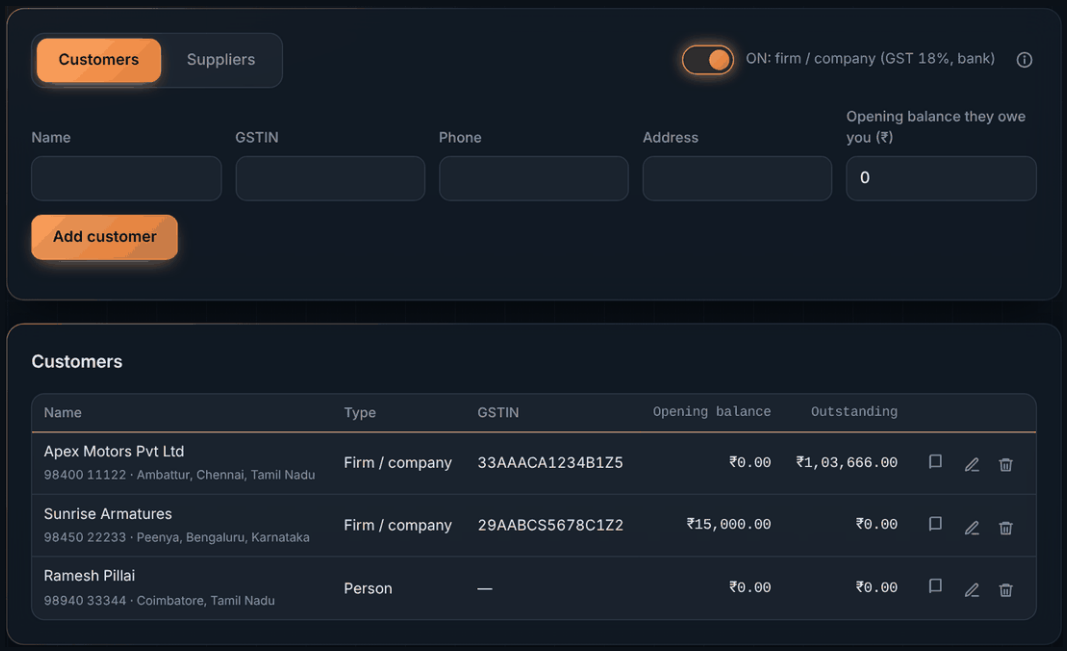

Also try

- Switch the invoice date and confirm the number sequence continues (no duplicates).
- Use special characters (& < > quotes) in the LR number and transporter; they must show as typed.

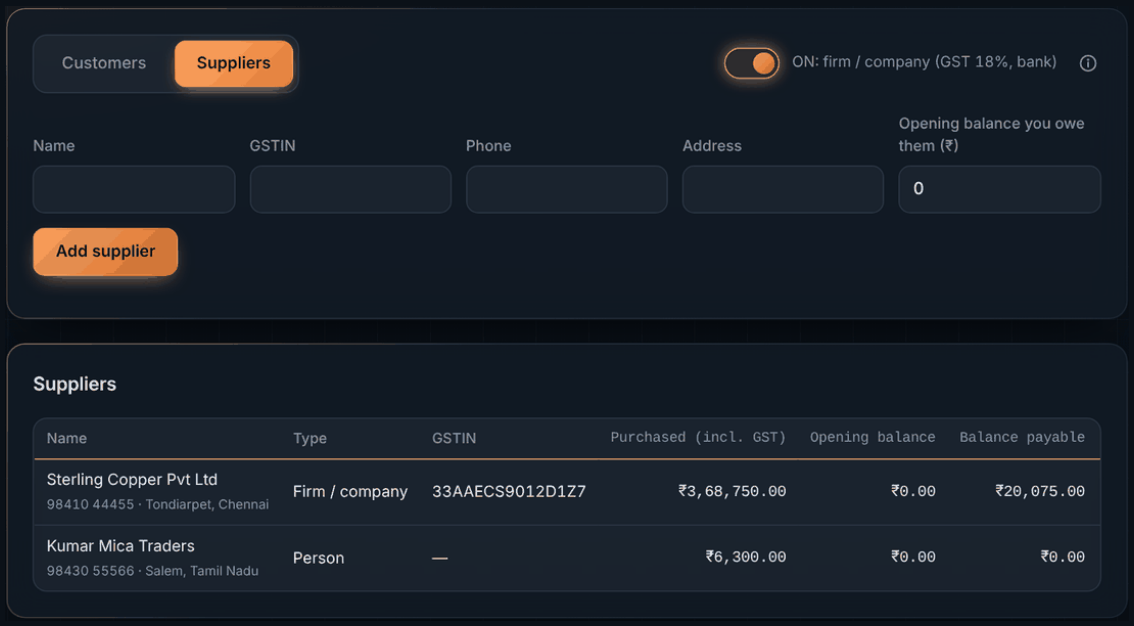

Customers & suppliers

Contacts with GST type and what each owes or is owed. Companies carry a GSTIN; persons use cash or GPay.

Customers

Suppliers

Test steps

#	Do this	Expected result
1	Open Customers. Check Apex Motors, Sunrise Armatures and Ramesh Pillai.	Apex shows ₹1,03,666 outstanding in the original sample; Sunrise ₹0; Ramesh ₹0 after his receipts.
2	Add a customer: company, name “Test Co 1”, GSTIN 33AAAAA0000A1Z5, phone, address, opening balance 5,000.	Appears in the list with balance ₹5,000 and in the invoice customer dropdown.
3	Add a customer who is a person with no GSTIN.	Saved as person; invoices for them are bills (no GST).
4	Open Suppliers and add a company supplier and a person supplier.	Both listed with their balances; available in Purchases.

#	Do this	Expected result
5	Try a very long name and a name with & and < characters.	Name displays exactly as typed, layout stays intact.
6	Add a customer with an empty name, then one with the same name as an existing customer.	“Enter a name.” and “This name already exists.”
7	Check the totals at the top (To collect / To pay) after adding opening balances.	Totals change by exactly the opening amounts you added.

Also try

• Look at the page at phone width; tables should scroll or wrap, never get cut off.

Reporting a problem

For each issue, write one row. Add a screenshot and send the list to the owner.

Module	Step #	What you did	Expected	What happened

Also report anything confusing, slow, misspelled or hard to read on a phone.
